CHAPTER 1

GENERAL

1-1 PURPOSE.

This chapter provides:

- 1-1.1 The rules for preparing an AFTO Form 223, TIME CHANGE REQUIREMENTS FORECASTS, for other than Federal Supply Group 13 and Materiel Management Code AQ selected items (CAD/PAD items are covered in chapter 4).
- 1-1.2 Procedures for processing the AFTO Form 223.
- 1-1.3 Lists of selected calendar and hourly time change items which require special reporting.

1-2 SCOPE.

The procedures prescribed in this chapter are applicable to the AFMC IM, ALC base support organization, AF bases, Major Commands and requisitioning agencies. Security Assistance (SA) Program countries requisitioning items designated in this technical order from Air Force sources will comply with AF base reporting requirements.

NOTE

The time change listings in chapters 2 and 3 contain only those time change items when the item manager determines he needs additional requirements forecast data to assure assets are available to meet replacement requirements. Recommended additions/deletions/changes from other activities should be submitted by letter/message direct to the item manager. Do not use the AFTO Form 22, TECHNICAL ORDER SYSTEM PUBLICATION IMPROVEMENT REPORT AND REPLY, System.

1-3 FORECASTING CYCLES.

There are two different types of time change items covered by chapters 2 and 3, each with a different forecast frequency. The types and frequencies of forecast are as follows:

- 1-3.1 The forecasts for items listed in chapter 2 will be by quarter, starting with the next quarter, and covering the next two years. Quarters cover periods beginning with October, January, April, and July. Time change due dates are determined by the earlier of either date of manufacture or date of installation, not to exceed total shelf or service life of the item. When an item's service life is less than the item's shelf life, the earlier expiration date will dictate the time change. For example, an item with a nine year shelf life and a seven year service life manufactured in August 1984 and installed in October 1985 will require time change no later than 31 October 1992 based on service life expiration.

- 1-3.2 The forecast for items listen in chapter 3 are to be completed and submitted to 311 HSC/YACM by 1 September each year and must include all end items owned by the forecasting organization as of 15 June.

- 1-3.3 Forms containing classified information will be assigned appropriate security classification and will be processed in accordance with applicable security directives.

1-4 BASE LEVEL RESPONSIBILITIES.

1-4.1 CAMS Automated Units.

- 1-4.1.1 All aircraft installed egress, life support, and survival equipment items must be loaded in the local CAMS database for time change tracking and requirements forecasting purposes.

- 1-4.1.2 The host data base manager will be responsible for extracting the applicable time change data from CAMS for all host and associated agencies.

1-4.2 Non-automated Units.

1-4.2.1 Documentation activity personnel will initiate Microsoft Excel automated AFTO Form 223 provided by each MAJCOM, ANG, or AFRC. A copy will be forwarded not later than 10 workdays following the as of date of the form to maintenance supply liaison or the plans and scheduling activity. The documentation activity is the maintenance or life support organization who has the responsibility for the maintenance of records for those items listed in chapters 2 and 3.

1-4.3 Maintenance supply liaison and plans and scheduling personnel will review the data to insure stock number and supply account number accuracy, and forward to the appropriate base supply office not later than 15 workdays following the as of date of the form.

1-4.4 Base supply personnel input applicable retail stock level information and return to the initiating documentation activity within 18 workdays after the as of date of the form.

1-4.5 All Units.

1-4.5.1 Completed unit time change forecast will be returned to the appropriate Wing egress or life support functional manager.

1-4.5.2 Wing functional managers will consolidate unit change forecasts into a total Wing forecast.

1-4.5.3 Each MAJCOM, ANG, and AFRC will consolidate their Wing requirements into a total forecast. This total forecast will be forwarded to 311 HSC/YACM via e-mail no later than 1 September.

1-5 AIR FORCE MATERIEL COMMAND RESPONSIBILITIES.

1-5.1 Calendar and hourly time change items requiring special handling will be selected by the IM from the applicable -6 series or commodity series TO. Listings of these items, including national stock number (NSN), manufacturers part number, noun, or nomenclature and applicability will be forwarded to HQ AFMC/LGII for publication in this TO. Items which are calendar time change based on the date of manufacture will be designated with a double asterisk preceding the stock number. Revision of published lists will be processed in the same manner.

1-5.2 HSC/YAC will send out a reminder message (applicable to items in chapter 3) prior to 1 June of each year to all higher headquarters with instructions to retransmit to subordinate units. This message will include any last minute changes to forecasting requirements or procedures and applicable 311 HSC/YAC POC's.

1-5.3 For items listed in chapter 3, -311 HSC/YAC will consolidate these requirements into a single USAF forecast to supplement, system generated buy and budget estimates. In all cases, the equipment specialist, program manager, and engineering team will review the projections received and make the appropriate adjustments and recommendations to the IM.

1-6 PREPARATION OF THE MICROSOFT EXCEL AUTOMATED AFTO FORM 223.

1-6.1 The automated Microsoft Excel spreadsheet provides all NSN's, part numbers, and nomenclatures identified in chapter 3. Corresponding quarterly and out year requirements are already formatted and ready for inputs. Each input automatically updates the total requirements for each NSN. Most fields are wire protected to standardize the formats and applicable entries.

1-6.2 ORGANIZATION. Enter the name of the organization.

1-6.3 DATE. Enter the date on which the form is prepared.

1-6.4 SUPPLY ACCOUNT NUMBER. Enter the six digit stock record account number.

1-6.5 MAJOR COMMAND. Enter the major command.

1-6.6 STOCK OR PART NUMBERS NOT INCLUDED IN CHAPTER 2. Time change projections for items not listed in chapters 2, 3, or 4 must be manually entered below the last automated NSN. Enter all applicable data formatted similar to the automated fields. Where interchangeable, secondary or substitute items are involved, enter the stock number or part number of the master (preferred) item.

1-6.7 NOUN. Enter the noun/nomenclature of the item.

1-6.8 SUPPLY INFO-ASSETS ON HAND. Enter the total number of serviceable assets on hand.

1-6.9 SUPPLY INFO-ASSETS ON ORDER. Enter the quantity of assets on order from the source of supply.

1-7 EGRESS INDICATOR.

The Egress Indicator is used in CAMS to assist in developing certain reports. Although named Egress, the indicator has expanded to include more than just egress items. The three codes are as follows:

1-7.1 "C" is used for CAD/PAD explosive items, but is not used or Egress explosive items. A lot number is required in CAMS.

1-7.2 "B" is used for an item that is both a CAD/PAD explosive item and an Egress explosive item. Egress items of this type do not always have to be installed on a seat itself. The approved installed on chain must always be followed for each aircraft type and actual installation must be properly documented manually or through the electronic data systems. A lot number is required.

1-7.3 "E" is an Egress item that is non-explosive and may not have an associated lot number. It may also be used for Life Support items. However it should be used if available.

CHAPTER 2

SELECTED CALENDAR AND HOURLY TIME CHANGE ITEMS

2-1 LISTING OF SELECTED ITEMS.

The following items identified by stock number, part number, noun and/or nomenclature, and weapon or support system or end item applicability have been selected by DoD IMs for the special reporting prescribed by chapter 1.

The items designated by a double asterisk (**) are items that expire based on date of manufacture or when the service life is exceeded as prescribed in each applicable -6 scheduled inspection and maintenance.

CHAPTER 3

SELECTED CALENDAR TIME CHANGE LIFE SUSTAINING ITEMS

3-1 LISTINGS OF SELECTED LIFE SUSTAINING ITEMS.

Many man-carrying parachutes and parachute components have a calendar year service life but cannot be listed in a -6 scheduled inspection and maintenance requirements manual. Items are not actually installed in the aircraft or may be moved from aircraft to aircraft and once service life begins, it continues to accrue even when the item is removed from service. The service life expiration date must be computed based on instructions contained in the applicable commodity series Technical Order (TO). An example of how to determine the service life expiration date is contained in TO 14D3-11-1, chapter 4. Because procurement leadtime may be 18 months or longer, a projection of replacement requirements is necessary to assure support. The following items have been selected for the special reporting prescribed by this TO. For those items contained in this chapter, the Microsoft Excel automated AFTO Form 223 will be completed by the life support or maintenance organization who has the responsibility for the maintenance of records. Items managed by DLA will be rolled up and transmitted by 311 HSC/YAC to DLA, during the normal annual submission.

CHAPTER 4

SELECTED CARTRIDGE/PROPELLANT ACTUATED DEVICES (CAD/PAD)

4-1 PURPOSE.

This chapter provides:

- 4-1.1 The procedure for completion and processing of manual AFTO Form 223, Time Change Requirements Forecasts for those units not hosted on Core Automated Maintenance System (CAMS).
- 4-1.2 The procedures for processing of automated AFTO Form 223 via CAMS. Units hosted on CAMS will use the automated procedures contained in this technical manual.
- 4-1.3 A list of selected time change items which require special reporting.

4-2 SCOPE.

The procedures prescribed in this chapter are applicable to AFMC Item Managers (IMs), ALC base support organizations, Air Force bases, and requisitioning agencies. Security Assistance (SA) Program countries requisitioning items designated in this technical manual from Air Force sources will comply with Air Force base reporting requirements.

NOTE

The time change items listed in table 4-1 are items the IMs have determined a need for additional forecast data. The items are either common to multiple aircraft or are changed out during other than a Program Depot Maintenance (PDM) cycle. These item must be forecast for using the manual or automated AFTO Form 223.

4-3 CHANGE PROCEDURES.

Submit recommended changes to this chapter by letter or message to OO-ALC/WMJ, 6043 Elm Lane, Hill AFB, UT 84056-5819. Do not use the AFTO Form 22 system. OO-ALC/WMJ is the technical content manager for the information in this chapter.

4-4 FORECASTING CYCLE.

- 4-4.1 CAD/PAD will be forecast annually. Forecasts are to be completed and submitted to OO-ALC/WMJ by 1 August each year and must include all aircraft owned by forecasting organization as of 15 June. Forecasts will be by quarter, for the first four years starting with the first quarter of the upcoming calendar year, and by year for the remaining years, covering a period of time corresponding to the total service life of the item or a minimum of nine years. Quarters cover periods beginning with January, April, July and October. CAD/PAD time change due dates are determined by the earlier of either date of manufacture (DOM) or date of installation (DOI) expiration, not to exceed total shelf or service life of the item. For example, an item manufactured in June 1980 with a ten-year shelf and service life would expire 30 June 1990, regardless of DOI. If the item was not installed until 1985, it would still expire 30 June 1990 because service life cannot exceed shelf life as determined from the DOM. When an item's service life is less than item's shelf life, the earlier expiration date would dictate time change. For example, an item with a nine-year shelf life and a seven-year service life manufactured in August 1984 and installed in October 1985 would require time change no later than 31 October 1992 based on service life expiration. However, if that part was installed in July of 1990, it must be changed out by August 1993, based on DOM.

- 4-4.2 Once a CAD/PAD item is installed the first time, its service life expiration cannot change. For example, a 5-year service life item installed in October 1994, reaches its service life in October 1999. If the part taken out and later reinstalled in another aircraft, the service life expiration remains October 1999. CAMS must be adjusted manually to reflect this.

4-4.3 Forecast for the full forecast period for all aircraft owned as of 15 June. Aircraft transfers will be forecast by the gaining base in the next forecast cycle after the transfer has occurred.

4-4.4 If it is known that a part will be changed out before the service life expires, a manual AFTO Form 223 needs to be completed reflecting the quantities in the year and quarter the part will be changed out.

4-4.5 Form/Computer products containing classified information will be assigned appropriate security classification and will be processed in accordance with applicable security directives.

4-4.6 Negative reports are required. Negative reports should be reported to OO-ALC/ WMJ by message.

4-5 BASE-LEVEL RESPONSIBILITIES.

4-5.1 Non-automated Units.

4-5.1.1 Documentation activity personnel will initiate the AFTO Form 223 by completing blocks 1 through 6. Block 4 should be filled in with the munitions Stock Record Account Number (SRAN) which can be obtained from the base Munitions Operations (MASO or AFK) chapter. The documentation activity is the shop, element, flight or chapter having upkeep responsibility for the records of those items listed in this chapter. Typically, this is the Plans and Scheduling chapter. Only forecast for those items listed in this table 4-1. Review forms to ensure part number accuracy and that all blocks are completed as specified in paragraph 4-7.

4-5.1.1.1 The wing plans and scheduling superintendent will ensure forecasts are reviewed for accuracy; part numbers, duplicate job standard numbers and all blocks are properly filled in; and coordinate the forecast with work centers responsible for maintaining CAD/PAD components (egress, life support and survival) before submission to the munitions activity.

4-5.1.2 The Munitions Operations chapter or MASO, and Plans and Scheduling chapters should both keep copies of all forecasts. The documentation activity should also forward one copy to OO-ALC/ WMJ, 6033 Elm Lane, Hill AFB, UT 84056-5819 by 1 August of each year. Send a courtesy copy to the applicable major command Maintenance Scheduling and Egress Functional Managers.

NOTE

Associate unit AFTO Forms 223 shall be forwarded by the MASO to OO-ALC/WMJ. Requirements shall not be consolidated with requirements of the host organization unless they have the same MAJCOM. Note any consolidations to WMJ. (AFTO Forms 223 in excell format are acceptable.)

4-5.2 CAMS Automated Units.

4-5.2.1 All aircraft installed CAD/PAD items must be loaded into local CAMS database for time change tracking and requirements forecasting purposes. This process greatly eases administrative workloads at both local and depot levels, and provides greater visibility of worldwide assets and requirements to depot level managers.

4-5.2.2 Host database manager will be responsible for extracting the CAD/PAD time change data from CAMS for all host and associate unit agencies.

4-5.3 All Units

4-5.3.1 All forecasts must include a base or unit POC, phone number and e-mail address (if available).

4-5.3.2 E-Mail can now be utilized to send forecast to OO-ALC/WMJ. A reminder message containing the most current e-mail address will be put out by OO-ALC/WMJ prior to 1 August of each year. Please check this message annually for the current e-mail address and other updated information, or call the CAD/PAD time change forecast POC at OO-ALC/WMJ.

4-6 AIR FORCE MATERIAL COMMAND RESPONSIBILITIES.

4-6.1 Send out a reminder message prior to 1 August of each year to all higher headquarters with instructions to retransmit to subordinate units. In it, provide current OO-ALC POC including e-mail and DSN. Provide any other last minute changes or updates to forecasting requirements or procedures.

4-6.2 Upon receipt of projected time change item requirements from AF bases, the OO-ALC POC will consolidate these requirements for all users. Equipment specialist will review forecasts received and make recommendations to IMs prior to initiating procurement actions.

4-7 MANUAL PREPARATION OF AFTO FORM 223.

4-7.1 BLOCK 1, LOCATION. Enter name of base.

4-7.2 BLOCK 2, ORGANIZATION. Enter name of organization the forecast is for (not necessarily the same as the forecasting/documentation chapter).

4-7.3 BLOCK 3, DATE. Enter date on which form is prepared.

4-7.4 BLOCK 4, SUPPLY ACCOUNT NUMBER. Enter six digit stock record account number(obtained from the base MASO or Munitions Operations chapter).

4-7.5 BLOCK 5, MAJOR COMMAND. Enter major command code (two digits). If unsure, just enter the MAJCOM (ex. ACC, AFMC, etc.).

4-7.6 BLOCK 6A, PART NUMBER. Enter the NSN (preferred) and/or part number. Where interchangeable, secondary or substitute items are involved, enter part number or NSN of installed item.

4-7.7 BLOCK 6B, NOUN. Enter noun/nomenclature of item.

4-7.8 BLOCK 6C, REQUIREMENTS QUANTITY. Enter quarterly projections in column under YEAR AND QUARTER. Enter last two digits of calendar year for which projection is being made above the line and 1, 2, 3 or 4 below the line for applicable quarter. Use additional sheets to forecast all required years.

4-7.9 BLOCK 6D, TOTAL. Enter the total of all remaining additional yearly forecasts as required to cover service life of item for those items with service life longer than 9 years.

4-7.10 BLOCK 7, SUPPLY INFORMATION. No data required.

4-8 CAMS AUTOMATED AFTO FORM 223.

4-8.1 The documentation activity will forecast all Work Unit Code (WUC) 97XXX items contained in their CAMS database using the CAMS 490 screen to produce the forecast. The only exception to this requirement is the B-1B. For these aircraft only forecast for those items listed in table 4-1. Item managers forecast for all other time change items replaced during PDM.

4-8.2 Do not include on hand balances as part of forecast.

4-8.3 It is essential that data be validated and checked for accuracy. If changes are required, update CAMS database and rerun program.

4-8.4 Information on CAMS 490 screens are in AFCSM 21-579 Vol 2, pgs 4-20 to 4-24 (formerly AFM 66-279, Vol XXVII). Units must ensure they fill out all the header data on the 490 screen. Use the servicing munitions SRAN (FV or FK) in the "Supply Acct Code" field. The CAMS 490 screen only covers three years worth of data at a time and must be pulled three times to obtain nine years of data.

4-8.5 Save the CAMS 490 screen to a 3.5-inch floppy disk in ASCII format. Units must use their host designation as file name, followed by ".ASC" or "TXT." For example, the 58FW forecast would have a file name 58FW.ASC. For multiple files, assigned numbers after the host designation, for example, 388FW1.ASC, 388FW2.ASC, 388FW3.ASC, and so on.

4-8.6 CAMS mainframes hosting more than one unit/organization should have separate files for each unit. If the organization is another government agency or a civilian company under contract to the Air Force, use a practical abbreviation for their file name.

4-8.7 Forward a copy of the disk as specified in 4-5, or by e-mail as specified in the annual update message from OO-ALC/WMJ.

4-8.8 If problems are encountered with this program, contact OO-ALC/WMJ, 6043 Elm Lane, Hill AFB, UT 84056-5819.

4-9 LISTING OF SELECTED ITEMS.

The following items (Table 4-1) identified by NSN, Part No., Noun/Nomenclature and Applicability have been selected by AFMC IMs for special reporting prescribed by this chapter. The items listed are due for change based on date of installation, date item was removed from its hermetically sealed container, or when item has exceeded shelf life as prescribed in each applicable -6 scheduled inspection and maintenance requirements manual or applicable commodity series technical order.
